1 Network locality at the scale of processes
Jeffrey C. Mogul
May 1992 **ACM Transactions on Computer Systems (TOCS)**, Volume 10 Issue 2

Full text available: pdf(1.80 MB) Additional Information: full citation, abstract, references, citings, index terms, review

Packets on a LAN can be viewed as a series of references to and from the objects they address. The amount of locality in this reference stream may be critical to the efficiency of network implementations, if the locality can be exploited through caching or scheduling mechanisms. Most previous studies have treated network locality with an addressing granularity of networks or individual hosts. This paper describes some experiments tracing locality at a finer grain, looking at references to i ...

2 Papers: A novel approach to mobility management
Ron Hutchins, Tracy Camp, Philip H. Enslow
January 1999 **ACM SIGCOMM Computer Communication Review**, Volume 29 Issue 1

Full text available: pdf(1.11 MB) Additional Information: full citation, abstract, references

In this paper, we propose a novel approach to computer mobility. Our approach allows mobility to be rapidly deployed, as the networking infrastructure required for deployment is available off the shelf. Furthermore, a mobile node does not require modifications in order to use these mobile services. While our approach provides rapid deployment and supports both IP and non-IP protocols, only a subset of mobile usage scenarios are offered. In other words, our approach does not solve all the problem ...

3 Network locality at the scale of processes
Jeffrey C. Mogul
August 1991 **ACM SIGCOMM Computer Communication Review , Proceedings of the conference on Communications architecture & protocols**, Volume 21 Issue 4

Full text available: pdf(1.19 MB) Additional Information: full citation, references, citings, index terms

4 The Click modular router

Robert Morris, Eddie Kohler, John Jannotti, M. Frans Kaashoek
December 1999 **ACM SIGOPS Operating Systems Review , Proceedings of the seventeenth ACM symposium on Operating systems principles**, Volume 33 Issue 5

Full text available: pdf(1.46 MB) Additional Information: full citation, abstract, references, citings, index terms

Click is a new software architecture for building flexible and configurable routers. A Click router is assembled from packet processing modules called *elements.* Individual elements implement simple router functions like packet classification, queueing, scheduling, and interfacing with network devices. Complete configurations are built by connecting elements into a graph; packets flow along the graph's edges. Several features make individual elements more powerful and complex configuration ...
